STAHLKREBS

High-grade steels since 1882

**Steel trade
with tradition**

9,000 m² hall area for optimum logistics

ERNST KREBS KG was founded in 1882 in Solingen.

At the same time as the start of the industrial production of cutting equipment and cutlery in Solingen the family business began selling scissors and knife steels and today it is in the transition from the fourth to the fifth generation.

In 125 years STAHL KREBS, with intuition for the needs of the market and the customers, has developed into a modern service provider which provides an innovative service covering all areas of stock keeping, processing and logistics as well as consultancy for materials and applications. The preservation of traditions is still one of the particular strengths here – with the establishment of long-term and trusting business connections to the fore.

The close cooperation with our business partners and the experience and specialist knowledge of 40 motivated employees ensure that we have a good market position today and also that our customers have decisive competitive advantages.

For our clients from many different branches we always keep a wide range of stainless steel as well as quality, high quality structural and tool steels in a warehouse with modern equipment.

Premises in the industrial zone Dycker Feld on the A 46.

Steel for razor-sharp products

Flexible batch sizes between whole pallets and single plates.

Sheets and coils in hot and cold-rolled versions.

We have a comprehensive flat steel range in many different material qualities, dimensions and surface finishes.

We specialise in stainless, martensitic stainless steels (knife steels) which are used for the production of cutting equipment and surgical instruments, among other things.

Another special feature of our stock range are austenitic, hard-rolled sheets in the 2H process (IIIa) which we in particular store for customers from the areas of stamping technology and medical equipment.

Irrespective of the version we attach the greatest importance to the best-possible surface on both sides with all products, in accordance with the high demands of our customers.

You will find further information on our product range on the internet at www.stahl-krebs.de.

A product range shows profile

Stainless flat, round and special sections as bars or coils.

With stainless sectional steels we can fall back on a wide product range so that we can also comply to unusual customer desires.

Our specialities are flat and round steels as well as single and double bevelled rolled knife steels in martensitic qualities. The focus is also on the production of cutting equipment and surgical instruments.

Complex special sections made according to customers' specifications can be realised in a short period of time with our close works contacts.

Bundling, packaging and labelling as the customer desires.

Use of tool steel in the drop forge.

Quality and high-grade steels for hot and cold processing.

We have tool, quality and high quality structural steel sections in many different dimensions in particular for drop forges from the area of cutting equipment and hand tool manufacture as well as the automotive supply industry.

Depending on the customers' desires we deliver steel bars, wire and semi-finished products via the warehouse just in time or long-distance.

Alloyed hot and cold work steels according to measurement specifications for tool making round off our product range.

Together with our efficient suppliers we guarantee highest quality and reliable supply.

You will find a summary of the deliverable qualities on the internet at www.stahl-krebs.de.

SERVICE is
paramount
for us!

Pre-cut parts and surface finishing based on customer specifications.

When requirements go beyond conventional standards, we can cut steel plates up to 9 mm thick with our plate shears within very short time periods – and to precise customer specifications. Dimensions of all sizes, including up to 3,000 mm in length, are possible.

We work closely with experienced external specialists to cut coils lengthwise/crosswise, as well as grind, brush and coat steel plates.

In the field of steel profiles we also use band saws to produce fixed lengths to customer specifications.

Large warehouses with state-of-the-art equipment.

To guarantee the delivery capacity we stock a wide range of products, approximately 10,000 t of steel over 9,000 m². This requires optimised warehouse logistics, which became the center of focus when plans for our storage facility were drawn up. Since then, our logistics have been continually enhanced and developed.

In-house vehicle fleet.

To deliver on schedule in the Bergisches Städtedreieck, we operate an in-house vehicle fleet with 3 trucks. For longer distances we work with flexible and reliable logistics partners.

Our guarantees for on schedule delivery to local area.
